

VTE SDK – Installazione

Ultimo aggiornamento: 06/12/2011 - 16:12

Prerequisiti

Tutte le istanziazioni dei moduli devono avvenire con `CRMEntity::getInstance($modulo)`, altrimenti l'estensioni di classi non funzionerà.

Copia dei files

1. Copiare tutta la directory modules/SDK
2. Creare la directory Smarty/templates/modules/SDK

Correzione manuale di altri files

Modificare i seguenti files, cercando nei files contenuti nell'allegato VTE-SDK_diff.zip la stringa “sdk”.

Nota: si consiglia di confrontare le modifiche con i corrispondenti files dell'SVN, in quanto più aggiornati.

```
data/CRMEntity.php
include/Ajax/CommonAjax.php
include/js/dtlviewajax.js
include/js/general.js
include/ListView/ListViewController.php
include/QueryGenerator/QueryGenerator.php
include/squirrelmail/src/redirect.php
include/utils/DetailViewUtils.php
include/utils/EditViewUtils.php
include/utils/ListViewUtils.php
include/utils/UserInfoUtil.php
include/utils/VtlibUtils.php
include/Webservices/Utils.php
include/Webservices/VtigerCRMObjectMeta.php
include/Webservices/VtigerWebserviceObject.php
include/Webservices/WebserviceField.php
index.php
install/PopulateSeedData.php
modules/Calendar/script.js
modules/Emails/EditView.php
modules/Leads/Leads.js
modules/Users/DefaultDataPopulator.php
modules/Users/Forms.php
Popup.php
Smarty/templates/ComposeEmail.tpl
Smarty/templates/DetailViewFields.tpl
Smarty/templates/DetailViewUI.tpl
Smarty/templates/DisplayFieldsHidden.tpl
Smarty/templates/DisplayFieldsReadonly.tpl
```

```
Smarty/templates/EditViewUI.tpl
Smarty/templates/Header.tpl
Smarty/templates/Popup.tpl
Smarty_setup.php
vtlib/Vtiger/LanguageImport.php
vtlib/Vtiger/Link.php
vtlib/Vtiger/ModuleBasic.php
vtlib/Vtiger/PackageExport.php
vtlib/Vtiger/PackageImport.php
vtlib/Vtiger/PackageUpdate.php
vtlib/Vtiger/Zip.php
```

Creazione tabelle

Creare un file InstallSDK.php nella root:

```
<?php
require_once('include/utils/utils.php');
include_once('vtlib/Vtiger/Module.php');
$Vtiger_Utills_Log = true;
session_start();
require_once('modules/SDK/InstallTables.php');
$SdkModule = new Vtiger_Module();
$SdkModule->name = 'SDK';
$SdkModule->isentitytype = false;
$SdkModule->save();
Vtiger_Module::fireEvent(
$SdkModule->name,
Vtiger_Module::EVENT_MODULE_POSTINSTALL
);
?>
```

E lanciarlo tramite browser. Dopodiché è possibile rimuoverlo.
